PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building and delivering applications through both independent projects and collaborative team environments. Combines a strong learn-by-building mindset with an appreciation for software engineering fundamentals, enabling the rapid adoption of new technologies while maintaining focus on scalability, maintainability, and user needs. Also experienced in integrating LLMs and building RAG and multi-agent workflows using LangGraph and LangChain.

SKILLS

- **Programming Languages:** JavaScript, TypeScript, Java, Python, SQL, C
- **Web Technologies & Frameworks:** Angular, React, Next.js, Vue.js, Tailwind CSS, Express.js, FastAPI, Spring Boot
- **Databases & Tools:** MySQL, MongoDB, PostgreSQL, Redis, Git, Docker
- **AI & Agentic Workflows:** LangGraph, LangSmith, LangChain, Retrieval-Augmented Generation (RAG), Multi-Agent Systems
- **Software Engineering Practices:** Data Structures & Algorithms (DSA), Agile/Scrum, RESTful APIs, API Integration

EXPERIENCE

- **EPAM Systems**
Junior Software Engineer Intern (A1) Jan 2026 – Jun 2026
 - Developed a full-stack eCommerce application using **Angular, Node.js, Express.js, and MongoDB**, implementing **REST APIs**, reusable UI components, **authentication**, and **role-based authorization** within an Agile/Scrum environment.
 - Built a **scalable product catalog architecture** using **Payload CMS** with **dynamic category hierarchies**, and enhanced the application through features such as **real-time currency conversion** and responsive user interfaces.
 - Improved application **quality and performance** through **Redis caching**, unit testing with **Vitest** achieving **80%+ coverage**, **SonarQube** analysis, and responsive, **accessibility-focused** frontend development.
- **Realfy Oasis**
Node.js Developer Intern Sep 2024 – Nov 2024
 - Designed and developed backend services for an **AI-powered health and fitness application** using Node.js, Express.js, Firestore, and Directus CMS, including REST APIs and core application workflows and backend functionality.
 - Integrated OpenAI API capabilities to generate **personalized diet and workout recommendations** based on **user goals, dietary preferences**, and other user-provided inputs for personalized fitness experiences and user needs.
 - Implemented JWT authentication with refresh tokens, request validation, centralized error handling, and caching; **containerized and deployed** the application using **Docker on DigitalOcean** for **reliable production deployment**.

PROJECTS

- **RAG-based WhatsApp Chatbot for Community Platform**
LangGraph, LangSmith, FastAPI, Docker, WhatsApp Integration, Multi-Agent System Aug 2025 – Sep 2025
 - Designed a **multi-agent RAG chatbot** using **LangGraph** to route user queries across jobs, news, businesses, offers, events, and community alerts, with specialized **retrieval and response-generation workflows**.
 - Built a **conversational pipeline** integrating **Qdrant semantic search, WhatsApp, OpenAI and Gemini models**, with **stateful multi-turn interactions** and **result aggregation across domains** for context-aware response generation.
 - Implemented **hierarchical rolling conversation memory** that progressively summarizes conversations and maintains higher-level summaries to preserve context while **controlling LLM token usage and inference costs**.
- **MusiBuzz Music Streaming & Recommendation Platform**
Python, Django, Vue.js, Tailwind CSS, RESTful APIs, Spotify API, Collaborative Filtering Nov 2023 – Feb 2024
 - Developed a **full-stack music discovery application** featuring a **highly responsive, utility-styled user interface** alongside a robust backend framework optimized to deliver **real-time external database search queries and results**.
 - Implemented a **collaborative filtering recommendation system** that analyzed **user listening patterns** to identify **similar users** and generate **personalized track recommendations** based on **shared listening preferences** and user behavior patterns.
- **ShareWithMe - Anonymous File Sharing Platform**
React, MongoDB, Express.js, Git, Firebase, RESTful APIs Jul 2023 – Oct 2023
 - Engineered an **authentication-free file-sharing architecture**, integrating a **Node.js/Express.js backend** with **Firebase Storage** for secure multi-format file uploads and high-availability cloud object recovery.
 - Implemented **password-protected file sharing** using **bcrypt** and designed **account-free retrieval workflows** that allow users to securely share files without exposing personal contact information.

EDUCATION

- **KL University**
B.Tech in Computer Science; 9.5 / 10 Aug 2022 – Apr 2026
