PROFESSIONAL SUMMARY

Full-Stack Software Engineer with hands-on experience building scalable web applications, secure REST APIs, and modern front-end architectures using modern JavaScript (ES6+), TypeScript, Angular, Node.js, and Express.js. Proven ability to integrate AI capabilities, including OpenAI and RAG workflows, into production-style full-stack systems. Adept at applying clean architecture, robust testing, and Agile practices to deliver reliable, user-focused software solutions.

SKILLS

- **Programming Languages:** JavaScript, TypeScript, Python, Java, C
- **Frontend Development:** Angular, React, Next.js, Tailwind CSS, HTML5, CSS3, RxJS, NgRx, Zustand
- **Backend & Databases:** Node.js, Express.js, RESTful APIs, Django, FastAPI, MongoDB, PostgreSQL, MySQL, Redis, Firebase
- **AI & Agentic Workflows:** LangGraph, LangSmith, LangChain, Retrieval-Augmented Generation (RAG), Multi-Agent Systems
- **Tools & DevOps:** Git, Docker, CI/CD, Postman, Payload CMS, DirectUS CMS

EXPERIENCE

• EPAM

Junior Software Engineer Intern

Jan 2026 – Jun 2026

- Built a full-stack eCommerce platform with **Angular, Node.js, Express.js, and MongoDB**, implementing JWT security, NgRx state management, Redis caching, rate limiting, and **scalable modular architecture for future reuse**.
- Implemented **real-time multi-currency pricing** for **INR, USD, and EUR**, integrating currency conversion into product and with **open-source Payload CMS** and **Cloudinary** for seamless content and media delivery.
- Delivered **production-ready features** in an **Agile Scrum team** using Git, Jenkins CI, Vitest, and SonarQube, applying peer code reviews, automated testing, quality gates, and engineering best practices to maintain **80%+ coverage**.

• Realify Oasis

Node.js Developer Intern

Sep 2024 – Nov 2024

- Built the backend from the ground up for my first **AI-driven health and fitness application**, integrating **OpenAI APIs** for personalized diet and workout recommendations based on user goals, preferences, and profile data.
- Designed secure **REST APIs** with **JWT authentication and refresh tokens**, request validation, centralized error handling, Firestore, and **self-hosted Directus CMS** for scalable content and application management.
- Containerized the backend with **Docker**, configured multiple services including **Directus CMS** to run together, and deployed the complete stack to **DigitalOcean** for a production-ready and scalable environment.

PROJECTS

• Multi-Agent RAG WhatsApp Assistant

LangGraph, LangSmith, FastAPI, Docker, WhatsApp Integration, Multi-Agent System

Aug 2025 – Sep 2025

- Designed a **multi-agent RAG chatbot** using LangGraph to route complex user queries across specific domains and aggregate responses from multiple knowledge sources for a seamless user experience.
- Implemented a **hierarchical rolling memory mechanism** to optimize token usage and reduce LLM inference costs by compressing conversations into summaries and super-summaries for efficiency.
- Developed a low-latency conversational pipeline integrating **semantic retrieval** and **LangSmith** tracing for prompt optimization and agent execution tracing to ensure high-quality responses.

• ShareWithMe - Anonymous File Sharing Platform

React, Node.js, Express.js, MongoDB, Firebase, RESTful APIs, JavaScript, HTML, CSS, Git, Postman

Jul 2023 – Oct 2023

- Engineered a **full-stack anonymous file-sharing platform** using the **MERN stack**, implementing a secure workflow that allows users to upload files up to 10MB and share them via unique codes without any account creation.
- Developed a **secure password protection system** for shared files by implementing **bcrypt hashing** for stored passwords, ensuring that sensitive file access is restricted and maximum user privacy is maintained throughout.

• MusiBuzz Music Streaming & Recommendation Platform

Python, Django, Vue.js, Tailwind CSS, RESTful APIs, Spotify API, Collaborative Filtering

Nov 2023 – Feb 2024

- Developed a **full-stack music streaming application** using **Vue.js** and **Django**, integrating the **Spotify API** to enable comprehensive search functionality across songs, artists, albums, and playlists for active users.
- Engineered a **collaborative filtering recommendation engine** that analyzes user listening histories to identify similarities and suggest personalized music tracks that the user has not yet discovered, enhancing discovery.

EDUCATION

• KL University

B.Tech in Computer Science; 9.5 / 10

Aug 2022 – Apr 2026
